Education

Bachelor of Science in Applied and Computational Mathematics (ACME) and Computer Science April 2027
Brigham Young University (GPA: 3.9 / 4.00) Provo, UT

- **Relevant Coursework:** Intro to CS (Python), Data Structures and Algorithms (C++), Machine Learning Algorithms (Python), Discrete Structures and Algorithms (C++), Data Science (Python), Linear and Computational Algebra (Python), Differential Equations, Advanced Software Construction (Java), Fundamentals of Mathematics, Readings in Math (Python), Software Engineering Lab 1 (Java), Multivariable Calculus, Theory of Analysis, Algorithm Design and Optimization (Python)

Technical Skills

Proficient: Python (NumPy, pandas, Seaborn, PyTorch, Flask, Huggingface, Matplotlib), C++, Java, Object Oriented Programming,

Experienced: Git, Tableau, Rad Studios, Machine Learning, Neural Networks

Familiar: Conditional Logic, Artificial Intelligence, Javascript, Html

Experience

Software Engineering Intern May 2026 – August 2026
BambooHR Draper, UT

- Built the end-to-end test suite for a C# to PHP service migration, enabling the team to meet its testing goals and verify behavioral parity between legacy and modernized code paths
- Developed an AI tax agent for an internal tax tool, automating tribal-knowledge-heavy workflows and reducing the manual research required of internal users
- Ported core C# service functionality to PHP, reducing technical debt across the platform

Software Engineering Intern - DoD Clearance April 2025 – August 2025
RDA Inc. Doylestown, PA

- Built a flight mission-planning draw tool on a GeoTAC map with a 3-engineer team, then presented it to the client and company executives
- Developed and debugged C++ and Java software used in Navy systems for tracking sonobuoys and processing data in real-time
- Researched AI use cases on code migration for a Capstone collaboration with BYU, focusing on automating code translation in a secure environment

Head Teaching Assistant - Intro to Computer Science (Python) Sep 2023 – April 2025
BYU - CS111 Provo, UT

- Taught 10+ lab sections of 20+ students, covering topics such as object oriented programming and recursion
- Assisted over 350 students in debugging and refactoring code, leading to an increased understanding of Python and programming concepts

Projects

Coca-Cola Image Classifier – BYU AIA Hackathon | *Keras, tensorflow log, CNN, Matplotlib, Python*

- Trained a CNN to classify Coca-Cola product images; achieved 85% validation accuracy
- Cleaned and normalized noisy datasets, improving performance by 10%
- Integrated TensorBoard logs to monitor model metrics, boosting final accuracy by 20%

New Testament Class Project | *Python, Flask, HTML, CSS, Javascript, getrequests, openai*

- Built a responsive web app that uses GPT-3 to answer user questions about biblical authorship
- Designed Flask backend to handle API queries and live user interaction in real-time

Leadership and Interests

- VP, BYU AI Association - Organized workshops, organized logistics for AI seminars and coding events
- Competitive Programming Club Leadership, actively participating in coding competitions and hackathons.
- Applied Math Student Advisory Committee - Provided curriculum feedback to enhance academic outcomes
